Smart Bug™ Receivers

- A personal, lightweight, wireless audio receiver that can receive 1, 2 or 3 different simultaneous broadcasts, depending on the model ordered.
- Equipped with a volume control, a soft-covered earplug for comfortable listening and a convenient attachment clip.
- Listened to through an ear plug only, so that it will not interfere with nor distract other spectators or attendees.
- Tuned to a fixed frequency over which customized content, including audio feeds from other sources, can be broadcast.
- Designed so that the frequencies over which it is broadcasted cannot be received by, nor do they interfere with, FM or AM radios or other in-venue broadcast signals.
- Measures roughly 3½" x 2¼" x ¾" (roughly the size of a cellular flip-phone) and weighs just under one ounce.
- Has a built-in, spring-loaded clip for easy attachment to clothing, purses, or other personal items.
- Is powered by two standard AAA batteries which typically last for up to 40 hours when in continuous use.
- Has a combination On/Off switch and volume control dial.
- Operates at low power and on a preset frequency, limiting the reception to the specific event and/or venue.
- Made of durable plastic and available in six standard translucent colors.
